Florida Public Radio, Inc.

**MODEL:
PSIFMV-8C**

TECHNICAL SPECIFICATIONS

Frequency / Channel	90.9 MHz
Power Rating	12 kW
ERP	100 kW
Service	Analog
Mount Position	Side
Polarization	Vertical
Directional	No
Radomes	No
Deicers	No

“The KLOX CP was for a facility of 100KW Vertical Only. Years earlier, I had suggested PSI to WTJT, Creston Florida, and WELJ, Brewton Alabama. The noncom stations were on a tight budget so I recommended PSI on the economics of PSI's pricing. At that point in time, the quality was yet to be found out.

When the antenna arrived at WTJT, I asked it's president, Earl Thompson what he thought of the quality of the product as it appeared uncrated, before installation. He said it looks very solid... very well built.

After installation, Earl reported the installation went well: no gas leaks and no standing wave, and was very pleased with the new coverage. Earl then bought a second PSI antenna for WELJ, Brewton.

CONT'D

“For me, the KLOX installation went well. The crew had no gripes. There's always a little nervousness after installation over two issues: will the nitrogen leak, and will there be

KLOX ANTENNA PSI MODEL PSIFMV-8C

standing wave. I'm happy to report that after eight months, the nitrogen is holding so well I don't notice a change on the gage, and the SWR is flat!

At our request, PSI packaged Andrew coax into the sale at a great discount.

Over my 30 years in broadcasting, I have purchased from a variety of antenna mfgs. I can say good things about all of them. But PSI has saved us money without sacrificing quality, by many hundreds of dollars.
